

# Condenseurs radiatifs de rosée

par **Daniel BEYSENS**

Directeur de recherches au CEA et ESPCI

**Iryna MILIMOUK-MELNYTCHOUK**

Ingénieur Arcofluid

et **Marc MUSELLI**

Maître de conférences à l'Université de Corse

## Données économiques

Les structures de condensation sont simples et ne demandent pas de compétences particulières pour leur installation et leur entretien. Les matériaux utilisés restent à faible coût, la création de telles installations dépendant essentiellement du coût du travail fourni lors des travaux d'assemblage. À l'heure actuelle (2009), le litre d'eau potable reste inférieur à quelques centimes d'euros.

ROSAO – Arcofluid  
general@arcofluid.fr

## Organismes

OPUR (Organisation Pour l'Utilisation de la Rosée)  
opur@icmcb.u-bordeaux.fr

## Événements

First International Conference on Fog and Fog Collection, Vancouver (Canada), 19-24 July, 1998.

2<sup>nd</sup> International Conference on Fog and Fog Collection, St John's (Canada), 16-20 July, 2001.

2<sup>nd</sup> International Conference on Sustainable Development of Energy, Water and Environment Systems in Dubrovnik, Croatia, June 2003.

Third International Conference on Fog, Fog Collection and Dew, Cape Town, South Africa, October 11-15, 2004.

International Conference on « Water Observation and Information System for Decision Support » (BALWOIS 2006), Ohrid, Republic of Macedonia - 23, 26 May 2006.

European PHOENICS User Meeting, 30/11-1/12 2006, Wimbledon, London, UK.

4<sup>th</sup> Conference on Fog, Fog Collection and Dew (La Serena, Chili, 23-27 July 2007).
